Page 66, BRT Q & A: Cut out and replace text:

instead of “Wounded”? **Yes, Yes.**

26. (A7.51 and D6.64) Can LVT Passengers fire group (albeit halved for non armored-halftrack fire) with LVT AAMGs? **Yes.**

27. (A7.53, A10.7, D6.65) Can Passenger leaders modify Passenger-only fire? Can they modify Passenger-LVT AAMG fire groups? **Yes, No.**

Discussion: Clearly leaders can modify Passenger-only fire per the rules cited. However, despite Passenger/LVT fire groups being OK per the Q+A above, the leadership modification of passenger/AFV fire groups described in D6.65 is qualified in every sentence as applying to armored halftracks. Therefore, combination Passenger-ger/AFV fire groups can't be modified.

28. (B30.2) What is the movement cost for a MMC to Place a DC into a hinterland pillbox hex containing palm trees, through the CA? **1 MF.**

Discussion: The question was really about whether soft sand movement costs affected DC placement in a pillbox through the pillbox CA. In short, it doesn't.

For the Marine player in BRT, dead LVTs provide excellent cover. The Japanese will succeed in destroying large numbers of LVTs, some of which will be blazing wrecks. These wrecks will be hindrances and TEM that make it harder for the succeeding waves of Wading infantry and vehicles to get hit. Blazing wrecks will convert into burnt-out wrecks in the Refit Phase after the scenario where they got “pyro-lyzed,” so they still supply some cover.
